Re: William Dick Lagoon

Dear Jack:

During their meeting last Thursday, April 25, the City of Coatesville Authority Board of Directors discussed your letter of April 5, particularly as it pertained to CCA's position on waiving the capacity fee for home water connection in the matter of the William Dick Lagoon. As you remember, CCA did waive these fees several years ago in a similar situation, but those fees were then only about one-third our present fee schedule.

We have made submissions to you regarding our conceptual design of a system to serve the additional properties. This design included three major elements:

1. The extension of a 10 inch water main into the area to be serviced.
2. Improvements to the Kings Highway pump station.
3. The installation of a 250,000 gallon water storage tank.

Based on the assumption that these three principle elements of construction are included in your estimates and will be a part of the project, the Board will agree to waiving capacity fees.

Please let me know if you can confirm that the project is as we have discussed with you so that this matter can be resolved.

With best regards, I am

Sincerely,

Wayne G. "Ted" Reed
Acting Executive Director
